

# SEO RANKING ON GOOGLE

## 1) Domain & Visibility

1. **Custom domain** lo (recommended): [gyasuddin.dev](https://gyasuddin.dev) ya [gyasuddin.me](https://gyasuddin.me).
2. Ensure site **public** hai (Netlify me password protection OFF).

**Why:** custom domain trust aur ranking badhata hai.

## 2) Basic HTML SEO (Head tags)

[public/index.html](#) ke `<head>` me ye add karo / update karo:

```
<title>Gyasuddin | MERN Stack Developer</title>
<meta name="description" content="Hi, I'm Gyasuddin — MERN Stack Developer
building web apps with React, Node, Express, MongoDB. Check projects & contact." />
<meta name="keywords" content="Gyasuddin, MERN Developer, React Developer, Full
Stack Developer" />
<link rel="canonical" href="https://gyasu-portfolio.netlify.app/" />
<meta name="author" content="Gyasuddin" />
```

## 3) Per-page Meta (SPA friendly)

Install karo aur har route me meta set karo:

`npm install react-helmet-async`

Example — `src/pages/About.jsx`:

```
import { Helmet } from "react-helmet-async";
```

```
export default function About() {
  return (
    <>
```

```

<Helmet>
  <title>About | Gyasuddin — MERN Stack Developer</title>
  <meta name="description" content="About Gyasuddin — MERN Stack
Developer..." />
  <link rel="canonical" href="https://gyasu-portfolio.netlify.app/about" />
</Helmet>
{/* page content */}
</>
);
}

```

**Do this for:** Home, About, Projects, Contact (unique title + description).

## 4) Sitemap

`public/sitemap.xml` create karo (example):

```

<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url><loc>https://gyasu-portfolio.netlify.app/</loc><priority>1.00</priority></url>
  <url><loc>https://gyasu-portfolio.netlify.app/about</loc><priority>0.80</priority></url>

  <url><loc>https://gyasu-portfolio.netlify.app/projects</loc><priority>0.80</priority></url>
  <url><loc>https://gyasu-portfolio.netlify.app/contact</loc><priority>0.70</priority></url>
</urlset>

```

**After deploy:** Google Search Console → Sitemaps → submit `sitemap.xml` (or full URL).

## 5) robots.txt

`public/robots.txt`:

```

User-agent: *
Allow: /

```

Sitemap: <https://gyasu-portfolio.netlify.app/sitemap.xml>

## 6) Netlify routing fix (important for SPA)

`public/_redirects` file banaao:

```
/* /index.html 200
```

**Kyun:** ensures `/about` returns the same HTML so bots can load client-side JS (or you prerender).

## 7) Structured Data (JSON-LD)

`index.html` ke `<head>` me add:

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Person",
  "name": "Gyasuddin",
  "url": "https://gyasu-portfolio.netlify.app",
  "jobTitle": "MERN Stack Developer",
  "sameAs": ["https://www.linkedin.com/in/gyasuddin", "https://github.com/gyasuddin"]
}
</script>
```

## 8) Open Graph & Twitter Card (Social previews)

`index.html` `<head>` me:

```
<meta property="og:title" content="Gyasuddin | MERN Stack Developer" />
<meta property="og:description" content="Portfolio of Gyasuddin — MERN Stack Developer" />
<meta property="og:image" content="https://gyasu-portfolio.netlify.app/preview.jpg" />
<meta property="og:url" content="https://gyasu-portfolio.netlify.app" />
<meta name="twitter:card" content="summary_large_image" />
```

## 9) Images & Performance

- Images optimize karo (WebP, compressed).
- Use `loading="lazy"` for offscreen images.
- Run Lighthouse (Chrome DevTools) and fix major performance issues (Largest Contentful Paint, TBT).

**Why:** Faster pages => better SEO.

## 10) Indexing Requests (Google Search Console)

For each page do:

1. GSC → URL Inspection → paste URL (e.g. `/about`) → Test Live URL → **Request Indexing**.
2. Repeat for `/projects`, `/contact`.

**Tip:** If "Couldn't fetch", ensure `_redirects`, sitemap + robots are correct and redeploy.

## 11) Backlinks & Name Signals (High Impact)

Add links to your portfolio from:

- LinkedIn bio (profile headline and about)
- GitHub profile README
- Resume / Email signature
- Dev.to / Medium article linking to portfolio
- College profile or freelancing profiles

**Why:** Google ties your name to your site via backlinks/mentions.

## 12) Analytics & Monitoring

- Add Google Analytics (GA4) or simple event tracking.
- Use GSC → Performance to monitor keywords, clicks, impressions.

## 13) Optional: Prerendering (If SPA still not indexed)

If Google doesn't index dynamic content, use Prerender service (prerender.io) or switch to Next.js static generation / SSR for full HTML snapshots.

## 14) Local Checks & Debugging

- Check `site:gyasu-portfolio.netlify.app` on Google to see indexed pages.
- Use `Fetch as Google` / URL Inspection in GSC.
- Check `https://gyasu-portfolio.netlify.app/robots.txt` and `.../sitemap.xml` in browser.

## 15) Timeline & Expectations

- After correct setup + request indexing → **2–14 days** typical for pages to appear.
- For stable top ranking on name: 1–4 weeks with backlinks + consistency.

## 16: Add Helmet in Each Page

♦ Example: `Home.jsx`

```
import { Helmet } from "react-helmet-async";
```

```
function Home() {
```

```
  return (
```

```
<>
```

```
<Helmet>
```

```
  <title>Gyasuddin | MERN Stack Developer Portfolio</title>
```

```
  <meta
```

```
    name="description"
```

```
    content="Hi, I'm Gyasuddin — a passionate MERN Stack Developer building  
modern, responsive, and SEO-optimized web applications."
```

```
  />
```

```
  <meta
```

```
    name="keywords"
```

```
    content="Gyasuddin, MERN Developer, React Developer, Node.js, MongoDB,  
Full Stack Developer"
```

```
  />
```

```
  <meta property="og:title" content="Gyasuddin | MERN Stack Developer" />
```

```
  <meta
```

```
    property="og:description"
```

```
    content="Explore my projects, skills, and achievements as a full stack developer."
```

```
  />
```

```
  <meta property="og:url" content="https://gyasu-portfolio.netlify.app/" />
```

```
  <meta property="og:type" content="website" />
```

```
</Helmet>
```

```
<h1>Welcome to My Portfolio</h1>
```

```
{/* Rest of your page content */}
```

```
</>  
  
);  
  
}  
  
export default Home;
```

## Quick Action Plan (Next 24–48 hrs)

1. Add `react-helmet-async` metas for all pages.
2. Add `_redirects` file and redeploy.
3. Ensure `sitemap.xml` & `robots.txt` in `public/` and accessible.
4. Submit sitemap in GSC and use URL Inspection → Request Indexing for all pages.
5. Add links on LinkedIn & GitHub.
